

Purpose

The goal of this guide is to provide guidance to grant seekers, town municipalities and private entities on different aspects of obtaining a water refill station. This document may be updated as new products reach the market.

When creating this guide, we focused on common water refill station models that can be found in gyms, restaurants, schools, museums, parks, hotels, etc. The design of a water refill station may differ depending on the needs of the people in which the venue helps to serve.

NSF/ ANSI 61 is an American National Standard used to evaluate the amounts of contaminants that leach from products into drinking waters. It's the National Standard for the human health effects of drinking water contact components, material and devices.

This guide is not an endorsement of any particular water refill station. Only you can do the research to determine if a product meets your needs.
